

ALTRD

Strategy Sprint Playbook

Industry intelligence → enterprise diagnosis → process redesign → AI
transformation → implementation planning

Internal methodology | Strategy through implementation

Purpose of the engagement

The Strategy Sprint is Altrd's structured methodology for understanding how an enterprise creates value, identifying where value is being lost or constrained, redesigning priority areas around AI, and converting those opportunities into an implementation-ready transformation program.

The engagement should answer six questions

- How does this industry make money?
- Why do the best-performing companies outperform the rest?
- Where does this company sit relative to those benchmarks?
- Where inside the organisation are the largest value gaps?
- How could those processes operate differently in an AI-native organisation?
- Which interventions should be implemented, in what order, and for what expected return?

Core flow

- Outside-in intelligence
- Leadership diagnosis
- Functional diagnosis
- Process reconstruction
- AI-native redesign
- Business case
- Implementation roadmap

PHASE 0: Build the Outside-In View

Objective

Enter the company already understanding its industry, economics, competitive context and likely transformation opportunities.

Who participates

- Promoter / CEO
- Strategy head / CEO office, if available
- One nominated project coordinator
- No broad functional interviews yet

0.1 Understand the business

- Business segments, products, customers, geographies and revenue mix
- Production / delivery model, plants, major customers and suppliers
- Revenue, growth, margins, employee cost, material cost, inventory, working capital, capex, capacity, utilisation and order book

0.2 Build the Industry Value Tree

- Revenue drivers: demand, order wins, pricing, mix, capacity, utilisation, throughput, delivery and services
- Cost drivers: materials, procurement, labour, engineering, productivity, rework, quality, energy, logistics and overhead
- Capital drivers: inventory, receivables, payables, WIP, cycle time, asset utilisation and forecast accuracy

0.3 Map the Industry Value Chain

- Map the end-to-end flow of value
- For each stage capture activities, decisions, people, inputs, outputs, systems, data, KPIs and economic impact

0.4 Classify activities

- Differentiating: where superior performance creates advantage
- Table stakes: necessary work suited to automation, agentification, standardisation or elimination
- Value-added services: new revenue, margin or customer value

0.5 Competitive Intelligence

- Select approximately 5 to 6 meaningful competitors or comparables
- Identify best performers overall and by metric
- Benchmark margin, growth, working capital, productivity, utilisation and execution
- Study operating models, technology, AI initiatives, services, partnerships and new business models
- Identify where the client appears stronger or weaker and form initial explanations

0.6 Initial Hypothesis Bank

- For each hypothesis capture external signal, suspected cause, validation metric, responsible function and questions
- Enter client conversations with hypotheses to validate or disprove

0.7 Diagnostic Pack

- Leadership questionnaire
- Department-specific questionnaires
- Data request list
- Stakeholder map
- Benchmark database
- Initial AI opportunity hypotheses

Phase output

- Company overview
- Industry economics, value tree and value chain
- Competitive landscape and benchmarks
- Activity classification
- Initial hypotheses
- Questionnaires, data request list and stakeholder map

PHASE 1: Leadership Alignment + Enterprise Diagnosis

Objective

Reconcile Altrd's outside-in view with management's inside-out understanding, establish the strategic north star and decide where to go deeper.

Who participates

- Promoter / CEO
- Selected direct reports
- Strategy head / CEO office
- Altrd senior strategy lead and engagement lead

1.1 Promoter / CEO Session

- Bring the value tree, competitive benchmarks, client positioning and hypotheses into the room
- Validate 3 to 5 year ambition, growth priorities, true competitors, margin drivers, constraints and strategic programs
- Understand value leakage, prior technology failures and sensitive areas

1.2 Establish the Strategic North Star

- Translate leadership inputs into a few enterprise outcomes such as throughput, working capital, engineering cycle time, project profitability or service revenue

1.3 Validate the Client Value Tree

- Confirm which drivers matter
- Validate metric definitions, missing information, unique economics and benchmark gaps

1.4 Decide Where to Go Deeper

- Select priority functions and processes
- Avoid blanket interviewing across the organisation

Phase output

- Management ambition and strategic priorities
- Validated Client Value Tree
- Confirmed competitive gaps and key value pools
- Functional priorities
- Confirmed / rejected hypotheses

PHASE 2: Functional Value Diagnosis

Objective

Understand where time, money, effort and performance gaps exist across priority functions, using numeric assessment wherever possible.

Who participates

- Business unit heads
- Functional / department / plant heads
- Process owners
- Selected managers or analysts who own relevant data

2.1 Structured Data Dump

- Collect data against the value tree and diagnostic questionnaire
- Replace qualitative pain points with volumes, approvals, cycle time, headcount, exceptions, delays, rework and economic impact

2.2 Create Functional Economics

- Scale: people, cost, transactions, projects and documents
- Efficiency: cycle time, productivity, cost per transaction and utilisation
- Quality: errors, rework, rejection, exceptions and complaints
- Business impact: revenue, margin, working capital, capacity, customer experience and risk

2.3 Functional Head Interviews

- Validate numbers and understand performance, effort, delays, rework, decisions, information search, systems and dependencies

2.4 Enterprise Opportunity Map

- Quantify each major issue and the value pool attached to it

2.5 Score Opportunities

- Business value
- Process pain
- AI suitability
- Feasibility
- Change complexity

Phase output

- Enterprise Opportunity Heatmap
- Quantified opportunity universe
- Priority score for each opportunity
- Select approximately 3 to 5 processes for forensic analysis

PHASE 3: Process Intelligence

Objective

Understand exactly how selected priority processes operate today, including real work rather than only documented SOPs.

Who participates

- Process owner
- Managers
- Actual process executors
- System and data owners
- IT representatives
- Upstream / downstream stakeholders
- Altrd FDE, consultant and solution architect

3.1 Observe the Work

- Watch real tasks being performed
- Inspect screens, documents, spreadsheets, emails, ERP, CRM, portals, calls, approvals and physical paperwork

3.2 Trace One Unit of Work

- Follow a real transaction from trigger to completion
- Capture activities, people, decisions, handoffs, systems, data movement, approvals, wait states and exceptions

3.3 Quantify Every Step

- Volume
- Active effort
- Waiting time
- People
- Systems
- Data
- Rework
- Exceptions
- Economic consequence

3.4 Build the Current-State Process Twin

- Represent the actual workflow with timing, effort, systems and business impact attached

3.5 Classify Friction

- Search
- Data entry
- Reconciliation
- Coordination
- Approval
- Reasoning
- Document generation
- Quality check
- Forecasting
- Monitoring
- Exception handling
- Knowledge retrieval
- Handoffs
- Waiting

- Rework

Phase output

- Current-State Process Twins
- Activities, people, systems and data
- Decisions, handoffs and approvals
- Exceptions, effort and cycle time
- Cost, rework, business consequence and root causes

PHASE 4: AI-Native Process Redesign

Objective

Redesign priority processes from first principles using current AI capabilities rather than simply adding AI to the existing workflow.

Who participates

- Process owner
- Relevant functional head
- IT / technology owner
- Selected operational experts
- Altrd strategy lead, FDE, AI engineer and solution architect

4.1 Challenge Every Activity

- ELIMINATE: does this need to exist?
- AUTOMATE: can deterministic technology perform it?
- AGENTIFY: can AI perform or coordinate it?
- AUGMENT: should a human remain responsible with AI assistance?
- RETAIN: is this genuinely better performed by a human?

4.2 Remove Handoffs

- Reduce emails, status requests, manual follow-ups, duplicate data entry, file transfers, unnecessary approvals and reporting

4.3 Reimagine Decision Rights

- Define what AI can decide, recommend or execute
- Define what requires human approval or exception escalation

4.4 Define Human + AI Roles

- Specify what AI monitors, retrieves, reasons about, generates, executes, coordinates and escalates
- Specify what humans decide, approve, negotiate, review and handle as exceptions

4.5 Create the Future-State Process

- Compare current and future activities, handoffs, approvals, effort and cycle time

Phase output

- Current-state vs future-state process
- Activities eliminated, automated, agentified, augmented and retained
- Human and AI responsibilities
- New decision rights and KPIs
- Required systems, integrations and data
- Expected economic impact

PHASE 5: Business Case + Transformation Portfolio

Objective

Convert process redesign into investment decisions and an implementation-ready transformation program.

Who participates

- Promoter / CEO
- CFO
- Relevant business heads
- CIO / CTO / IT head
- Transformation office, if present
- Altrd engagement, strategy, solution and commercial leads

5.1 Build the Business Case

- Current state: effort, cost, delay, rework, errors, leakage, working capital and capacity constraints
- Future state: effort reduction, cycle-time reduction, productivity, capacity, revenue, margin and working-capital impact
- Investment: build, integration, infrastructure, licences, change management and ongoing cost
- Return: annual benefit, payback, ROI and value at stake

5.2 Define KPIs

- Use measurable operational KPIs such as tender preparation time, engineering hours, procurement cycle time, inventory days, schedule adherence and forecast accuracy

5.3 Prioritise the Portfolio

- NOW: high value, feasible and ready
- NEXT: high potential but dependent on another initiative
- LATER: useful but not currently important enough
- DO NOT BUILD: low ROI, mismatch, poor data or unnecessary complexity

5.4 Build the Transformation Sequence

- Show dependencies and avoid disconnected AI projects

5.5 Define Implementation Scope

- Business objective, users and workflow
- Functional and AI requirements
- Data, integrations, interfaces and governance
- KPIs, timeline, team and indicative commercial requirement

Phase output

- Business cases
- KPI framework
- NOW / NEXT / LATER / DO NOT BUILD portfolio
- Transformation sequence and dependencies
- Implementation-ready scope for NOW initiatives

Final Deliverable: Altrd AI Transformation Blueprint

- 01. Executive Transformation Thesis
- 02. Industry Intelligence
- 03. Competitive Intelligence
- 04. Enterprise Value Tree
- 05. Enterprise Diagnostic
- 06. Opportunity Heatmap
- 07. Current-State Process Twins
- 08. AI-Native Operating Model
- 09. Transformation Portfolio
- 10. Business Cases
- 11. KPI Framework
- 12. Implementation Roadmap
- 13. Implementation Scope

What Altrd should capture as internal IP

Every engagement should create both a client deliverable and a reusable Altrd knowledge asset.

Industry knowledge

- Value trees and value chains
- Industry metrics and competitive benchmarks
- Economics and margin drivers

Process knowledge

- Process taxonomy and standard process maps
- Typical activity volumes
- Common bottlenecks and friction patterns

AI knowledge

- AI patterns and agent architectures
- Integration patterns
- Evals and governance patterns

Commercial + consulting knowledge

- ROI benchmarks and implementation effort
- Typical value pools
- Questions, diagnostic frameworks, scoring models, data requests and workshop templates

Underlying Altrd consulting model

- UNDERSTAND THE INDUSTRY - How does value get created?
- BENCHMARK THE BUSINESS - Why are the winners winning?
- DIAGNOSE THE COMPANY - Where is value constrained?
- UNDERSTAND THE WORK - How does the process actually operate?
- REIMAGINE THE WORK - What should disappear, automate, become agentic or remain human?
- QUANTIFY THE VALUE - What is the business case?
- BUILD THE ROADMAP - What should happen now, next, later or never?
- IMPLEMENT - Altrd builds the priority transformations
